

# How to Stay Cool Without Planet Being Heated?

Bhagyashri Sangtani  
B. Tech. (CE) III Sem  
MKSSS's Cummins

## Introduction of Problem

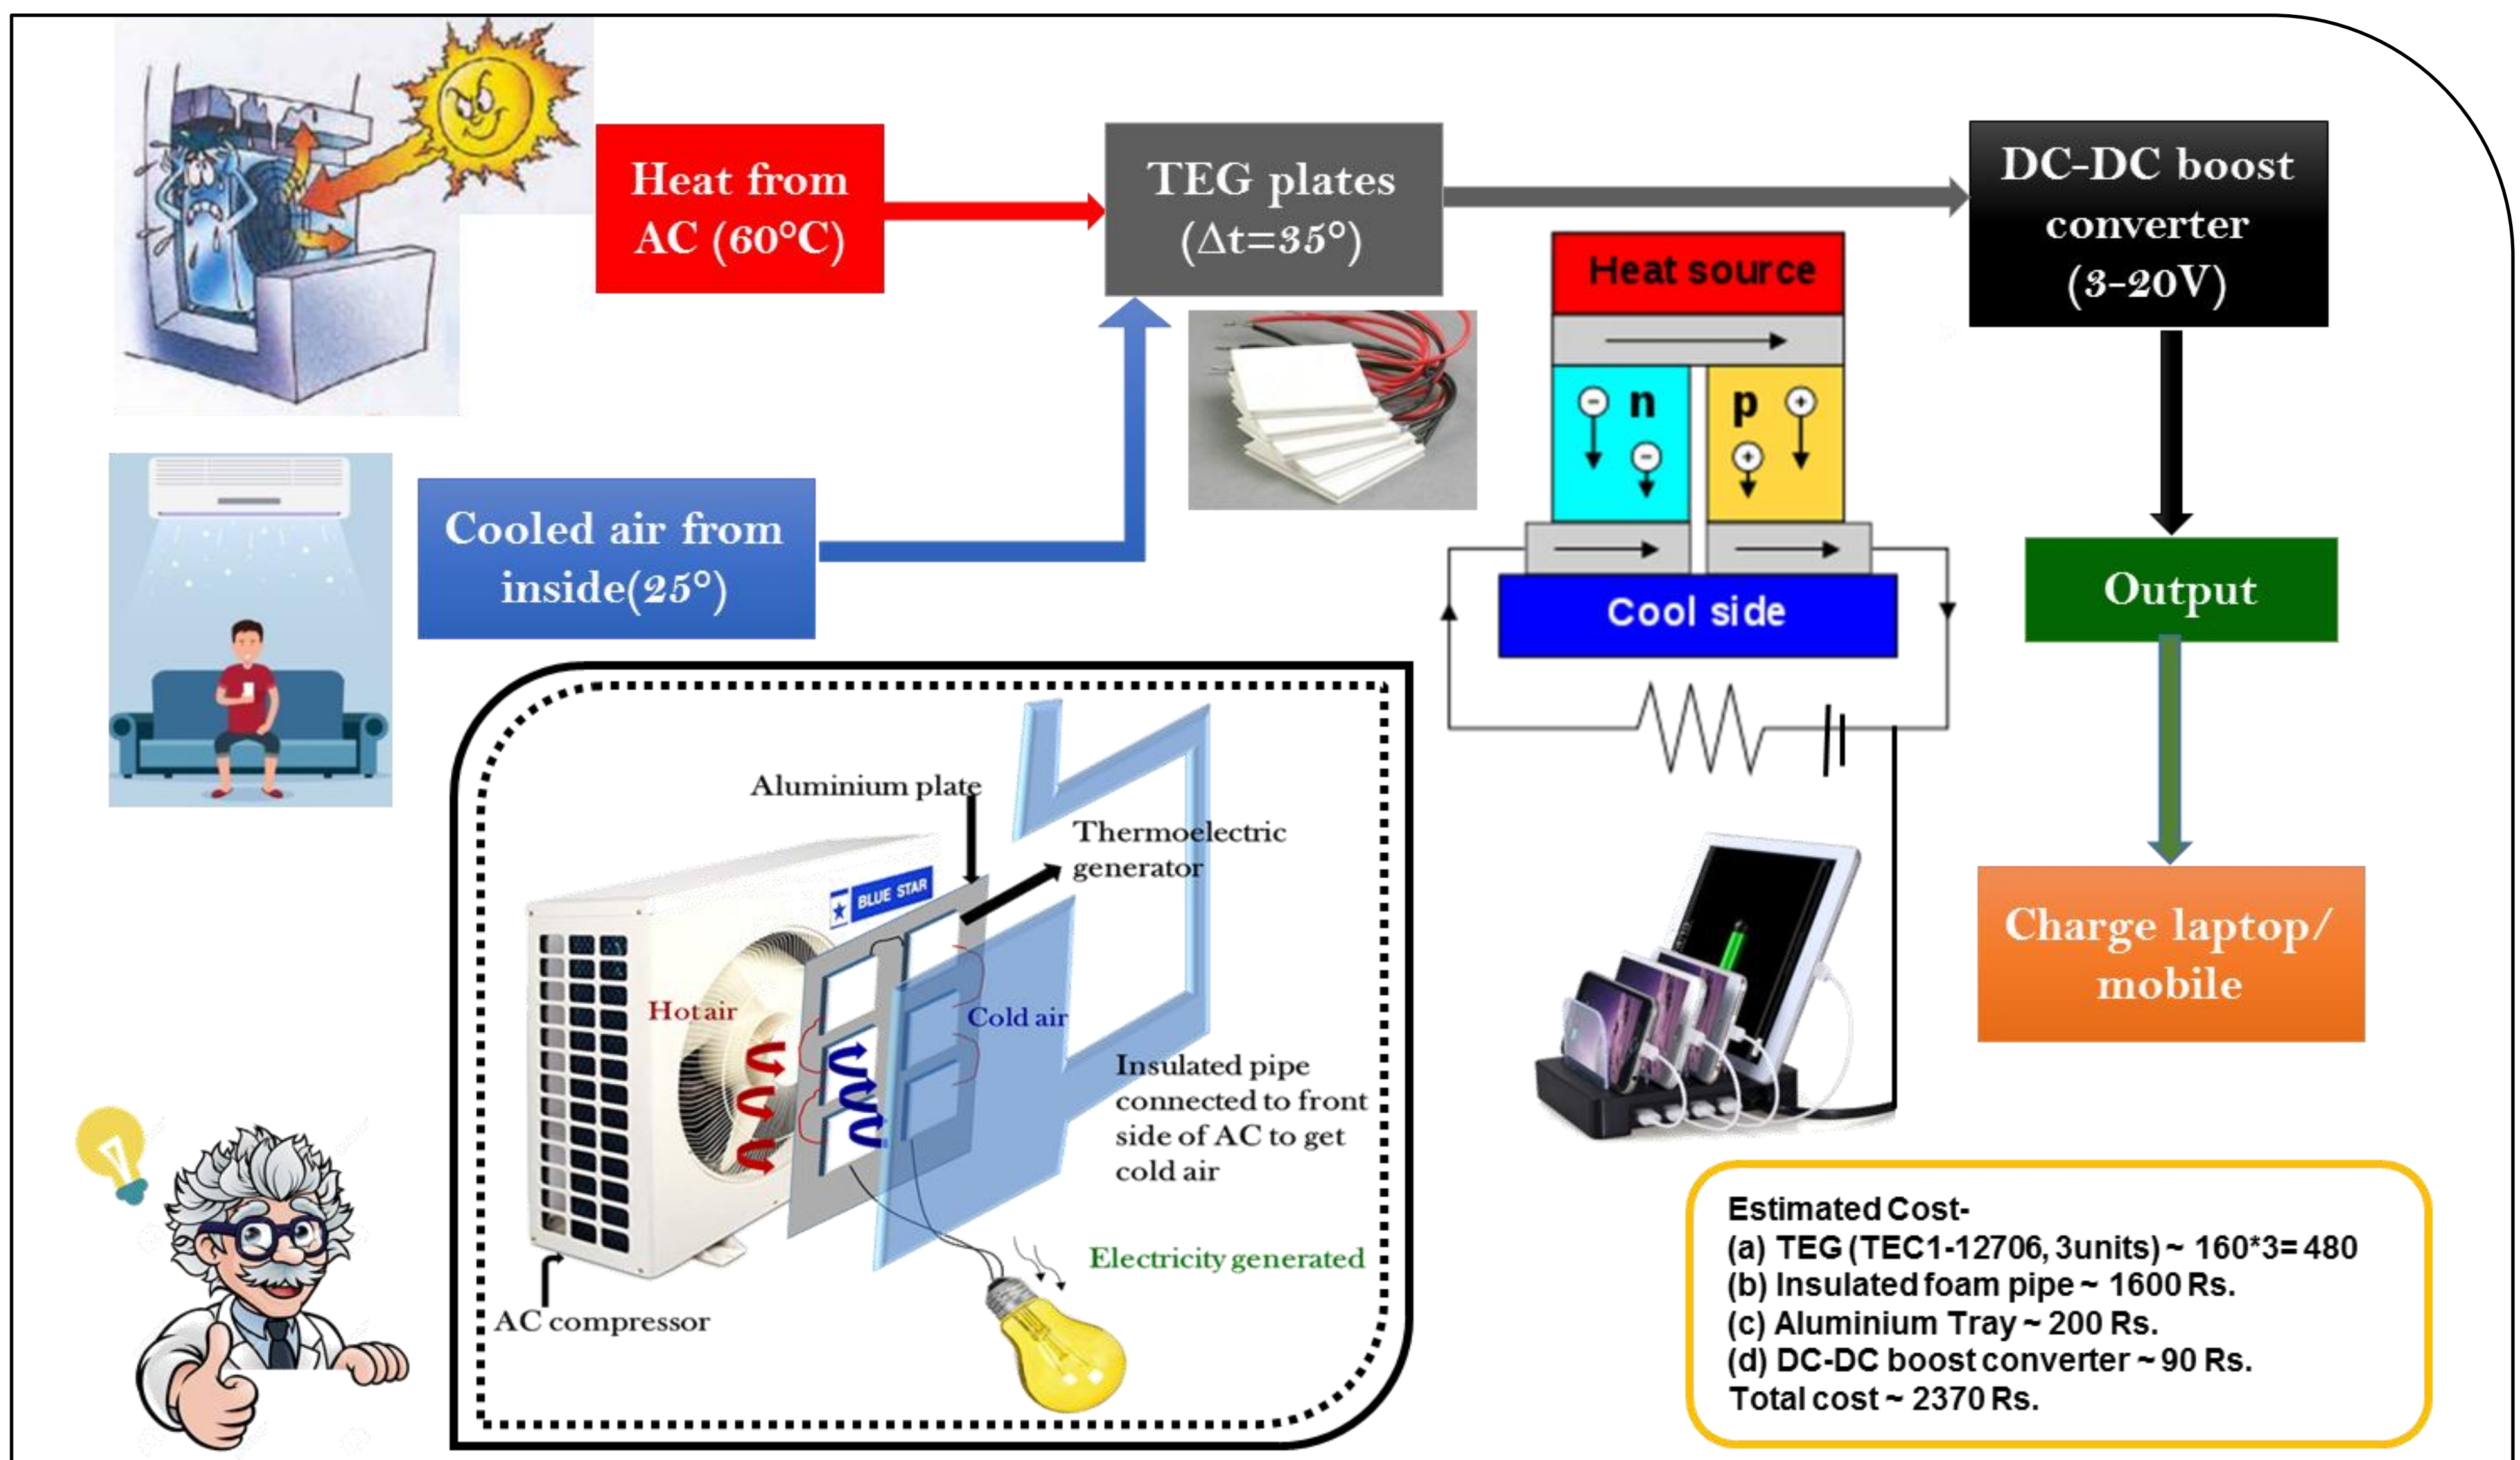

- Air conditioners (AC) are becoming essential due to raise in global temperature.
- It is observed that **AC contributes to the elevation in regular temp by  $\sim 2^{\circ}\text{F}$**  at various places in the world including India where forgoing AC could be deadly in summer. Similar calamities are documented for Europe and Russia which causes thousand deaths.
- Such reports are emphasizing to **find out the solution to reduce/utilization of heat release from AC** to avoid alike disaster in near future.

Is there any escape from this situation??

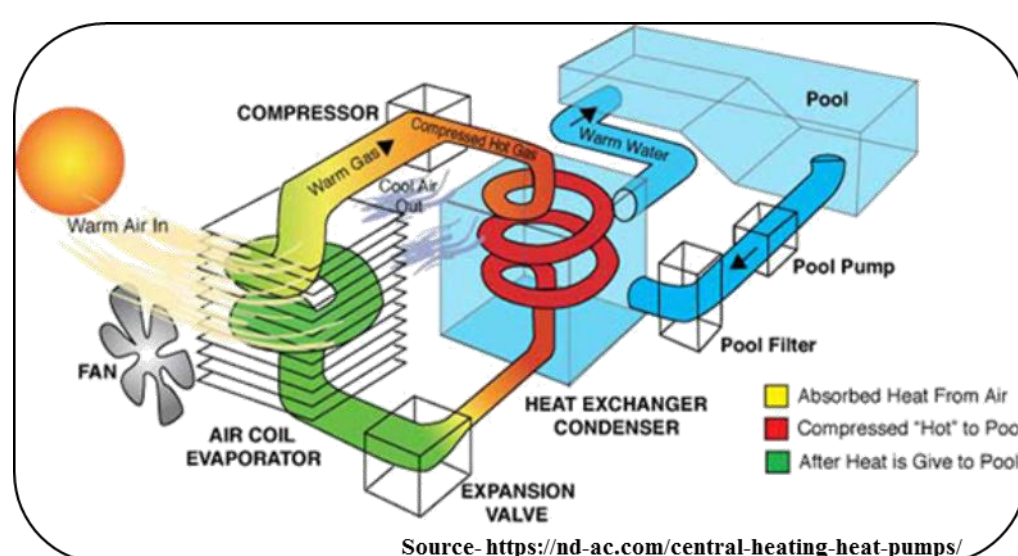

## Solution- Energy conservation is the energy independence

## Uniqueness

### Existing Ideas

- Released heat from AC could be used to **warm the water**

Good Option but what if water scarcity during summer???

### Why Unique

- One can charge various gadgets from AC
- Reduce the electricity load

## Acknowledgment

Support and encouragement from Head of Computer Engineering Department & Director, MKSSS's Cummins College of Engineering for Women is greatly acknowledged.
